1. Maps and related materials (including gazetteers, atlases, timetables, etc.)	24	An essential tool in geographic research; prime source for all basic map compilation work. Value dependent on quality of coverage. Cover- age for many areas inadequate.
2. Books, periodicals, and newspapers	19	Important for detailed regional and topical information, plus bibliographic "leads to other sources," especially for denied areas.
3. Radio broadcasts (VRS, B.B.C., etc.)	4	Medium to good. Valuable source for advance reporting in denied areas; requires careful evalua- tion.

6. Department of State reports	11	The most important single source other than 1 and 2 for all areas except the USSR, for which it is of low importance. Of particular value for policy problems related to political boundary treatment of maps.
7. DIA (Army, Navy, Air Force) reports	9	Important source whose value lies primarily in subject matter of significance to the military.
